

Mobile Pipe Recovery Shop

Pipe Recovery Unit

 Reduce response time

About This Service

The WOS Wireline Pipe Recovery Unit is a mobile shop that arrives at a location for recovery of stuck or lost drill pipe, tubing, casing, or other tools from a wellbore. Typical pipe recovery operations take time to set up and get the proper tools on the truck while drilling rigs or drill-out units sit as the operator incurs costly downtime. The WOS Pipe Recovery Unit is preloaded with equipment for nearly all scenarios to efficiently recover stuck tubing strings and drill pipe. Since the Pipe Recovery Unit is always loaded, WOS has reduced the call-out time and allows for operations to be planned while en route to the location. This unit will arrive on location with the WOS wireline truck, allow for full rebuilds of tools, and keep personnel and equipment out of the elements. Equipped for vertical and horizontal applications, the goal of the Pipe Recovery Unit is to get the fish out of the hole quickly and effectively. WOS provides a holistic approach, expertise, and experience to ensure the successful retrieval of the stuck or lost pipe, all while minimizing potential damage to the wellbore. WOS is focused on the critical process of maintaining wellbore integrity, preventing costly delays, and avoiding environmental or safety risks associated with leaving pipe or tools downhole.

Benefits

- WOS's holistic approach minimizes downtime by supplying and servicing the entire pipe recovery operation on board.
- It decreases response time and provides a mobile shop for pipe recovery operations.
- WOS downhole fishing division ensures a seamless operation when traditional fishing and workover operations are needed.
- WOS is dedicated to actively managing the process in conjunction with the operator to ensure efficient pipe recovery operations.

 Recover tubing and drillpipe in vertical or horizontal applications

Pipe Recovery Unit

 WOS provides a holistic approach, expertise, and experience to ensure a successful operation

Services Provided on Trailer

- Evaluation services provide an initial assessment to understand the situation and determine the location and condition of the stuck or lost pipe allowing for proper tool selection and optimized pipe recovery operations.
- Cutters and perforations for pipe recovery, casing cutting, well abandonment, or well intervention operations enable the safe and efficient cutting of pipe or casing sections, allowing for the removal or separation of targeted equipment from the wellbore or gaining a circulation access point.
- Plug Setting is used in various well operations, including zonal isolation, well abandonment, well control, and well intervention. WOS's ability to set plugs using wireline and slickline equipment accurately and reliably allows for efficient and controlled wellbore management.
- WOS can operate in vertical and horizontal environments allowing drill pipe, tubing and casing to be recovered.

Pipe Recovery Operations

- Freepoint Tools
- Live HD cameras
- Stuck Pipe Log
- Jet, Chemical, Plasma Cutters and Split Shots
- Tubing Punchers
- Severing Tools
- Backoff Services
- Wireline/Slickline Retrievable Casing and Tubing Plugs
- Cast Iron/Composite Products
- 3rd Party Tractor Conveyance
